⚠ Important Information

This product is not an end user product. It was developed and manufactured for further processing by trained personnel.

EMC Rules

This unit has to be installed in a shielded housing. If not installed in a properly shielded enclosure, and used in accordance with the instruction manual, this product may cause radio interference in which case the user may be required to take adequate measures at his or her own expense.

0.5	16-Apr-07	Power consumption results added

1.2 Introduction

The ETe-CN700 is an all-in-one cpu module. It is fully compliant with the ETX 3.0 standard.

The design of the MSC ETE-CN700 module supports the VIA Eden(V4) and VIA C7 processor combined with the CN700 and 8237R+ bridge components thus enabling new features like DDR memory support, Dual Display Support, USB 2.0 and onboard SATA according to the new ETX® Specification 3.0.

On board features include an 100MBit Ethernet controller , two EIDE ports, audio, parallel / floppy, serial, keyboard and mouse interfaces, four usb 2.0 ports.

Please visit our website <http://www.msc-ge.com> where you can find drivers, firmware updates and documentation (--> COM/Embedded Modules --> ET(e)/ETX® --> ETE-CN700).

2 Technical Information

2.1 Specifications

Core

CPU	VIA Eden(V4) 400MHz - 1.2GHz, Eden ULV(V4), VIA C7 up to 1.8GHz, all versions soldered (with optional heatspreader)
ChipSet	VIA CN700 Nortbridge VIA VT8237R+ Southbridge
L2 Cache	128KB second level cache on chip
Memory	200-Pin SO-DIMM socket (max. 1GB DDR400 SDRAM)
ISA-Bus Interface	ITE8888 PCI to ISA Bridge (ETX connector X2)
PCI-Bus Interface	VIA VT8237R+ Southbridge; 4 external PCI bus masters (ETX connector X1)
Video	3D Unichrome™ Pro controller (integrated in CN700 Chipset) up to 32MB Video Memory (UMA) dual video streams LVDS Interface: 24-bit, 2pixel/clock; max. resolution 1.600 x 1.200 TFT Interface: 18-bit (optional) , 3.3V CRT Interface: max. resolution 1.600 x 1.200
Ethernet	10/100Base-TX controller in VT8237R+ (PHY VT6103)
Audio	VT8237R+ AC97 Audio controller VT1613 AC97 Codec
USB	integrated in VT8237R+ South Bridge 4 USB 2.0 ports
EIDE	integrated in VT8237R+ South Bridge 2 Ports (primary, secondary) for up to 4 devices Ultra ATA/66/100/133; PIO Mode 4; PCI IDE Busmaster
Floppy Disk	integrated in W83627HF-AW SuperIO (pins shared with parallel port)
Serial, COM1, COM2	integrated in W83627HF-AW SuperIO 2 x TTL IrDA on COM2

Parallel	integrated in W83627HF-AW SuperIO 1 Parallel Port (PS/2-compatible/ECP/EPP via SETUP configurable, pins shared with floppy port)
Keyboard, Mouse	MFII-Keyboard Interface, PS/2-Mouse Interface integrated in VT8237R+ South Bridge
Realtime Clock	integrated in VT8237R+ South Bridge, external battery required
Watchdog	PIC12C509A Start delay and timeout configurable via SETUP creates hardware reset
BIOS	Phoenix cME FirstBIOS Pro in 1024 KB Flash LPC Firmware Hub
EEPROM	EEPROM for CMOS Setup backup
System Monitoring	1 fan with speed input (valid only if optional fan connector is used) 2 temperatures (CPU by MAX1618, Board by W83627HF-AW SuperIO) 6 voltages (CPU core, +1.05,+1.50,+2.5V, +3.3V, + 5V)
Power supply	+5V ±5%
Typical supply current (DOS prompt)	VIA Eden 400Mhz 1.60 A (8.00 W) VIA Eden 1000Mhz 1.95 A (9.75 W) VIA Eden 1200Mhz 2.15 A (10.75 W) VIA C7 1500Mhz 2.90 A (14.50 W)
Typical CMOS battery power consumption	2.5µA at +3V RTC / CMOS integrated in VT8237R+ South Bridge
Environment	Temperature 0 ... + 60°C (operating), -25 ... + 85°C (non operating)
	Humidity (rel.) 0 ... 95 % (operating), 5 ... 95 % (non operating)

Note:

A heat spreader plate is available from MSC providing a standard thermal interface for the module.

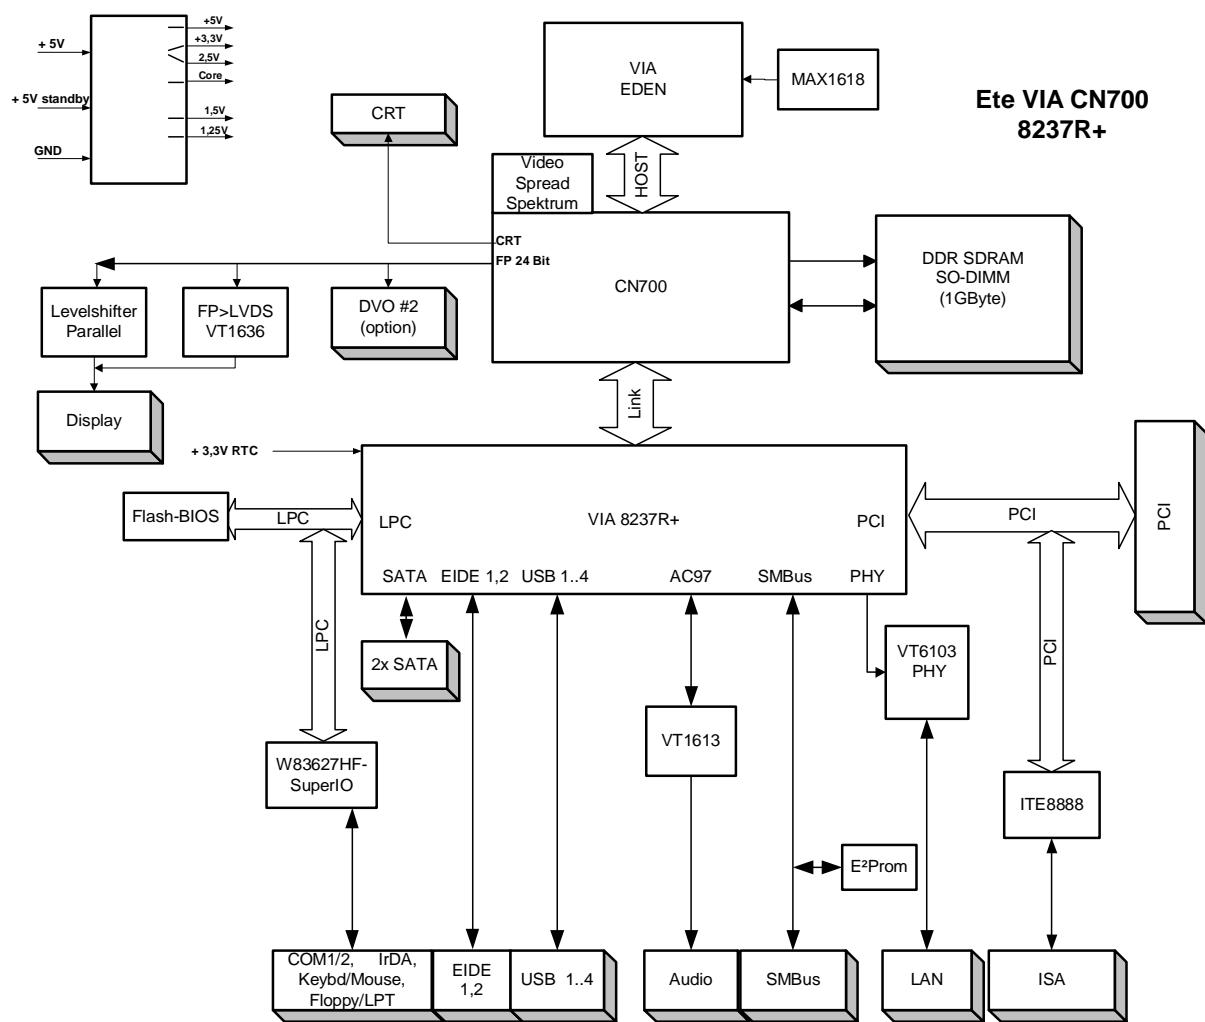

The heat spreader is not a heat sink!

The heat spreader is thermally connected to the cpu and the VIA CN700 Northbridge using a 3mm aluminium plate (for the cpu) and thermal gap pads. About 75% of the power dissipated by the module is conducted to the heat spreader. The thermal solution (passive or active) has to be designed for 8 W (400MHz) to about 19 W (1,5GHz).

Dimensions

95 x 114 x 12 mm

2.2 Block Diagram

2.3 Installation

2.3.1 Jumpers and switches

There are no jumpers or switches.

2.3.2 Installing a DRAM SO-DIMM module

The ETe-CN700 board has a standard SO-DIMM socket for 2.5V DDR SO-DIMM modules (max.1 Gbyte)

Note : Module height should not exceed 1250mil (= 31.75 mm)

2.4 Watchdog

The Ete-CN700 board has a watchdog function implemented using a PIC microcontroller with an SMBus interface. Via SETUP the watchdog can be enabled and configured.

If the watchdog is enabled a counter is started which creates a reset if it is not retriggered within a programmable time window.

Watchdog: Enabled / Disabled (default)

Initial Delay : 1s, 5s, 10s, 30s (default), 1min, 5min, 10min, 30min

Timeout : 0,4s, 1s, 5s, 10s, 30s (default), 1min, 5 min, 10min

Start on Boot: if yes, watchdog starts at the end of POST (power on self-test) before the OS is loaded

The watchdog is controlled by the software UEBI Interface.

2.5 Interrupts, DMA channels, Upper memory

IRQ	used for	available	comment
0	Timer 0	No	
1	Keyboard	No	
2	Slave 8259	No	
3	COM2	No	(1)
4	COM1	No	(1)
5	Audio / LPT2	Yes	(1) / (2) / (3)
6	Floppy Disk Controller	No	(1)
7	LPT1	No	(1)
8	Real Time Clock	No	
9	PCI	Yes	(1)
10	PCI / COM3	Yes	(1) / (3)
11	PCI / COM4	Yes	(1) / (3)
12	PS/2 Mouse	No	(1)
13	Floating Point Unit	No	
14	Primary IDE	No	(1)
15	Secondary IDE	No	(1)

- (1) If the device is disabled in SETUP, the interrupt is available
- (2) Can be used by legacy audio (sound blaster)
- (3) Can be used by external Super I/O controller FDC37C669

2.5.1 PCI Devices

PCI Device	PCI Interrupt	REQ/GNT (0..3)	IDSEL
PCI/ISA Bridge		4	AD25
SATA	INT E		
USB 0..3 (Southbridge)	INT F		
Sound AC 97	INT G		
LAN	INT H		

2.5.2 DMA channels

DMA	used for	available	comment
0		Yes	
1		(Yes)	Can be used by legacy audio (sound blaster)
2	Floppy Disk Controller	No	
3	(ECP, if enabled)	(No)	LPT ECP mode (default)
4	Cascade	No	
5..7	---	Yes	

2.5.3 Memory map

Upper Memory	used for	available	comment
C0000h..CFFFFh	VGA BIOS	No	64 KB VGA BIOS
D0000h..DBFFFh		Yes	ISA bus or shadow RAM
DC000h..DFFFFh	USB Buffer	No	
E0000h..FFFFFh	System BIOS	No	

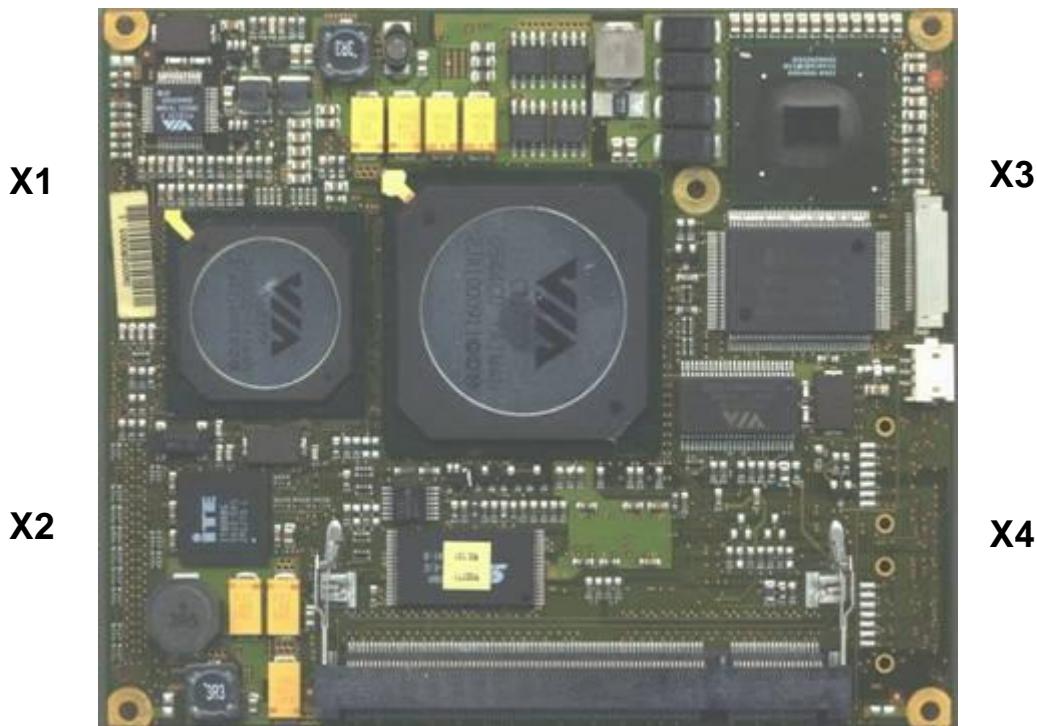

2.5.4 SMBus address map

Device	A6	A5	A4	A3	A2	A1	A0	R/W	address *)
SMBus host	0	0	0	1	0	0	0	x	10h / 08h
core temperature (MAX1618)	0	1	0	1	0	1	0	x	54h / 2Ah
clock synthesizer (ICS952906)	1	1	0	1	0	0	1	x	D2h / 69h
Ram Clock (ICS9P936)	1	1	0	1	1	1	0	x	DCh / 6Eh
watchdog (PIC12C509)	1	0	1	1	0	0	0	x	B0h / 58h
CMOS backup EEPROM #1	1	0	1	0	1	0	0	x	A8h / 54h
CMOS backup EEPROM #2	1	0	1	0	1	0	1	x	AAh / 55h
SPD EEPROM (SO-DIMM)	1	0	1	0	0	0	0	x	A0h / 50h

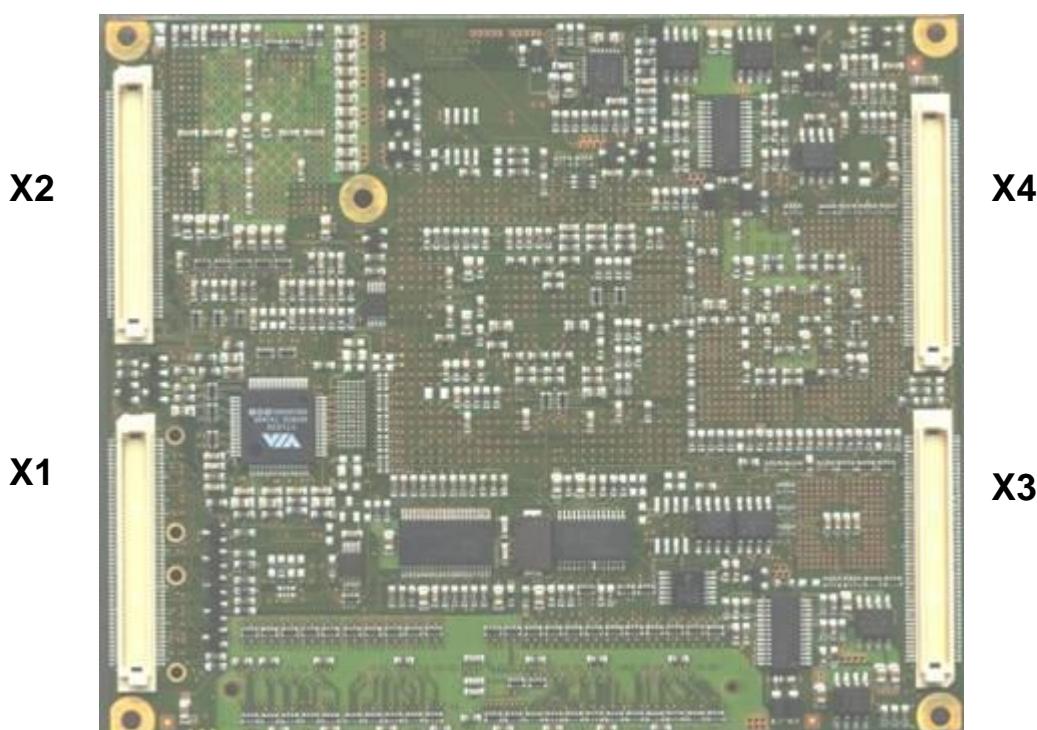

*) 8 bit address (with R/W) / 7 bit address (without R/W)

BIOS

4.3 Introduction

This guide describes the Phoenix FirstBIOS Pro Startup screen and contains information on how to access Phoenix FirstBIOS Pro setup to modify the settings which control Phoenix pre-OS (operating system) functions.

4.3.1 BIOS Version

Phoenix FirstBIOS™ Pro for ETE-CN700 BIOS V1.00

4.3.2 Startup Screen Overview

The Phoenix FirstBIOS Pro Startup screen is a graphical user interface (GUI) that is included in Phoenix FirstBIOS Pro products. A Startup screen consists of:

Progress Bar: Part of the Status Bar, it indicates the progress of the Startup Screen functions and provides user prompting and POST status

The following figure shows the various parts of a generic Startup Screen at 1024x768 resolution:

4.3.3 Activity Detection Background

While the FirstBIOS Startup screen is displayed, press the Setup Entry key (F2 - FirstBIOS default). The FirstBIOS Startup Status Bar acknowledges the input, and at the end of POST, the screen clears and Setup launches.

An example of the Startup Status Bar displaying changing state is shown in the following figure. The Please Wait... text is displayed after the F2 key is pressed to acknowledge user input.

Active status bar:

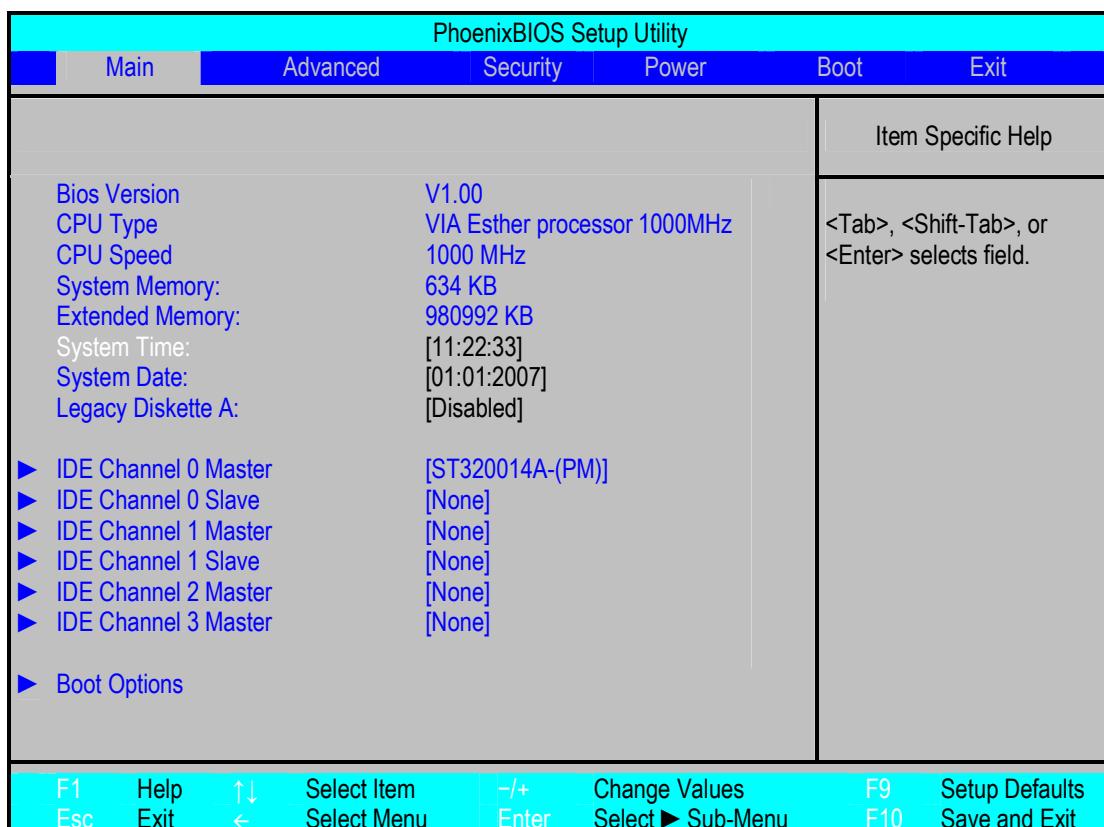

4.4 FirstBIOS Pro Setup Utility

With the Phoenix FirstBIOS Pro Setup program, you can modify FirstBIOS Pro settings and control the special features of your computer. The Setup program uses a number of menus for making changes and turning the special features on or off. This chapter provides an overview of the Setup utility and describes at a high-level how to use it.

4.4.1 The Main Menu

To start the Phoenix FirstBIOS Pro Setup utility, press [F2] to launch Setup. The Setup main menu displays.

The Menu Bar

The Menu Bar at the top of the window lists these selections:

Menu Items	Description
Main	Use this menu for basic system configuration.
Advanced	Use this menu to set the Advanced Features available on your system's chipset.
Security	Use this menu to set User and Supervisor Passwords and the Backup and Virus-Check reminders.
Power	Use this menu to configure Power-Management features.

Boot	Use this menu to set the boot order in which the BIOS attempts to boot to OS.
Exit	Exits the current menu.

Use the left and right arrow keys on your keyboard to make a menu selection.

The Legend Bar

Use the keys listed in the legend bar on the bottom of the screen to make your selections, or to exit the current menu. The following table describes the legend keys and their alternates:

Key	Function
F1 or Alt-H	General Help window.
Esc	Exit this menu.
Arrow keys	Select a different menu.
Up and down arrow keys	Move cursor up and down.
Tab or Shift-Tab	Cycle cursor up and down.
Home or End	Move cursor to top or bottom of window.
PgUp or PgDn	Move cursor to next or previous page.
F5 or -	Select the previous value for the field.
F6 or + or Space	Select the next value for the field.
F9	Load the Default Configuration values (for all menus).
F10	Save and exit.
Enter	Execute command or select submenu.
Alt-R	Refresh screen.

To select an item, use the arrow keys to move the cursor to the field you want. Then use the plus-and-minus value keys to select a value for that field. The Save Values commands in the Exit Menu save the values currently displayed in all the menus.

To display a submenu, use the arrow keys to move the cursor to the sub menu you want. Then press Enter. A pointer marks all submenus.

4.4.1.1 Main Menu Selections

You can make the following selections on the Main Menu itself. Use the sub menus for other selections.

Feature	Options	Description
---------	---------	-------------

BIOS Version	N/A	Displays the current BIOS Version.
CPU Type	N/A	Displays the installed CPU Type.
CPU Speed	N/A	Displays the CPU Speed.
System Time	HH:MM:SS	Set the System Time.
System Date	DD/MM/YYYY	Set the System Date.
System Memory	N/A	Displays amount of conventional memory detected during boot up.
Extended Memory	N/A	Displays amount of extended memory detected during boot up.
Legacy Diskette A	Disabled, 1.44 MB 3½"	Set the type of floppy-disk drive installed in your system.
IDE Channel 0 Master	PATA. See "Masters and Slaves" section.	
IDE Channel 0 Slave	PATA. See "Masters and Slaves" section.	
IDE Channel 1 Master	PATA. See "Masters and Slaves" section.	
IDE Channel 1 Slave	PATA. See "Masters and Slaves" section.	
IDE Channel 2 Master	SATA. See "Masters and Slaves" section.	
IDE Channel 3 Master	SATA. See "Masters and Slaves" section.	
Boot Options	See "Boot Option" section.	

4.4.1.2 Masters and Slaves

The **Master** and **Slave** settings on the Main Menu control these types of devices:

- **Hard-disk drives**
- **Removable-disk drives**
- **CD-ROM drives**

There is one IDE connector on your motherboard, usually labeled "Primary IDE". There are usually two connectors on each ribbon cable attached to IDE connector. When you have connected two drives to this connector, the one on the end of the cable is the Master.

When you enter Setup, the Main Menu displays the results of Autotyping information each drive provides about its own size and other characteristics - and how they are arranged as Masters or Slaves on your machine.

Note: Do not attempt to change these settings unless you have an installed drive that does not autotype properly (such as an older hard-disk drive that does not support autotyping).

If you need to change your drive settings, select one of the Master or Slave drives on the Main Menu. This will display a menu like this:

PhoenixBIOS Setup Utility		
Main		
Primary Master [ST320014A-(PM)]		Item Specific Help
Type:	[User] CHS Format	User = you enter parameters of hard-disk drive installed at this connection.
Cylinders:	[16383]	
Heads:	[16]	
Sectors:	[63]	
Maximum Capacity:	8455MB LBA Format	Auto = autotypes hard-disk drive installed here.
Total Sectors:	39102336	CD-ROM = a CD-ROM drive is installed here.
Maximum Capacity:	20020MB	ATAPI Removable = removable disk drive is installed here.
Multi-Sector Transfers:	[16 Sectors]	
LBA Mode Control:	[Enabled]	
32 Bit I/O:	[Disabled]	
Transfer Mode:	[FPIO 4 / DMA 2]	
Ultra DMA Mode:	[Mode 5]	
Smart Monitoring:	Disabled	
F1 Help Esc Exit	↑ Select Item ← Select Menu	↔ Change Values Enter Select ► Sub-Menu
		F9 Setup Defaults F10 Save and Exit

Note: The capacity is displayed in 'real' Mbytes (1MB=1024*1024 Bytes) Drives with a total capacity greater than 8Gbyte operate in LBA format only.

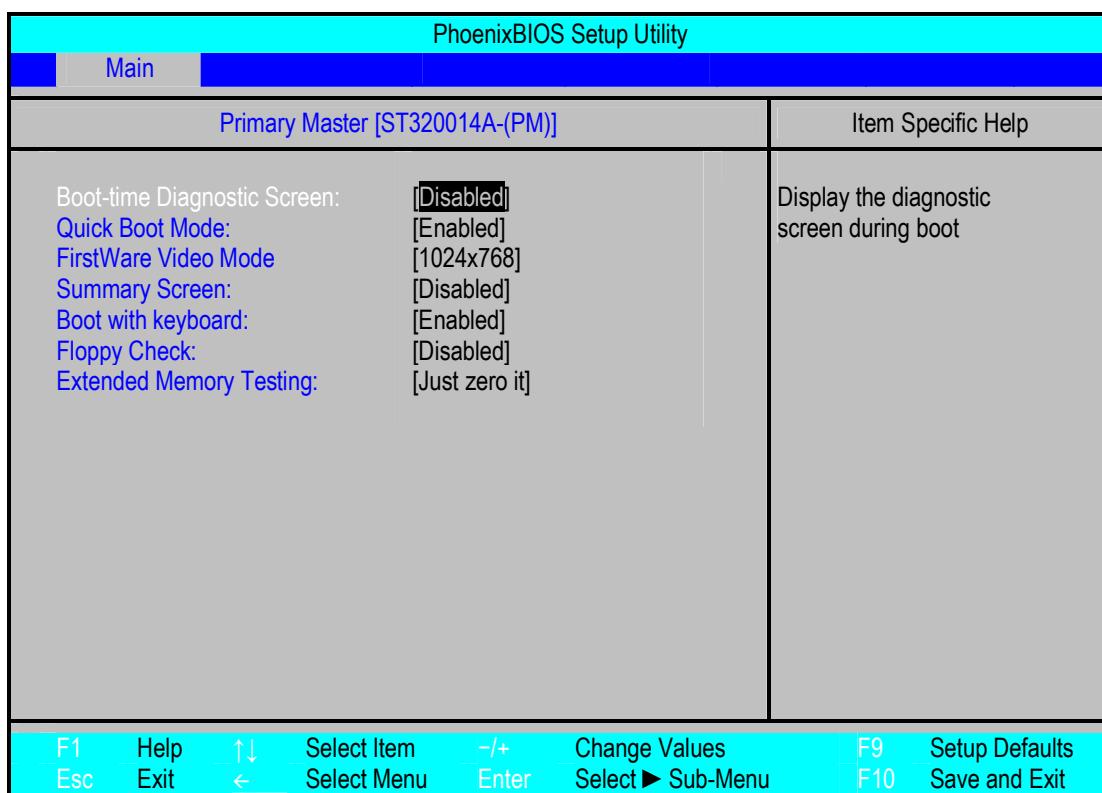

Use the following chart to configure the hard disk drive with Advanced Hard Disk Features:

Feature	Options	Description
Type	None, Auto, User, IDE Removable, ATAPI Removable, Other ATAPI, CD-ROM	<p><i>None</i> = Autotyping is not able to supply the drive type or end user has selected None, disabling any drive that may be installed.</p> <p><i>Auto</i> = Autotyping, the drive itself supplies the information.</p> <p><i>User</i> = You supply the hard-disk drive information in the following fields.</p> <p><i>IDE Removable</i> = Removable Disk Drive</p> <p><i>ATAPI Removable</i> = Removable</p>

		Disk Drive. CD-ROM = CD-ROM drive.
Cylinders	1 to 65536	Number of Cylinders
Heads	1 to 16	Number of read/write heads
Sectors	1 to 63	Number of sectors per track
Multi-Sector Transfers	Disabled, 2 sectors, 4 sectors, 8 sectors, 16 sectors	Any selection except <i>Disabled</i> determines the number of sectors transferred per block.
LBA Mode Control	Disabled, Enabled	Enabling LBA causes Logical Block Addressing to be used in place of Cylinders, Heads, & Sectors.
32 Bit I/O	Disabled, Enabled	Enables 32-bit communication between CPU and IDE card. Requires PCI or local bus.
Transfer Mode	Standard Fast PIO 1 Fast PIO 2 Fast PIO 3 Fast PIO 4 FPIO 3 / DMA 1 FPIO 4 / DMA 2	Selects the method for transferring the data between the hard disk and system memory. The Setup menu only lists those options supported by the drive and platform.
Ultra DMA Mode	Disabled Mode 0 Mode 1 Mode 2 Mode 3 Mode 4 Mode 5 Mode 6	Ultra DMA Mode supports 33/66/100/133 MB/sec transfer rate for fixed disk drives.
Smart Monitoring	N/A	Displays smart monitoring capability of hard disk device.

WARNING: Incorrect settings can cause your system to malfunction.

4.4.1.3 Boot Options

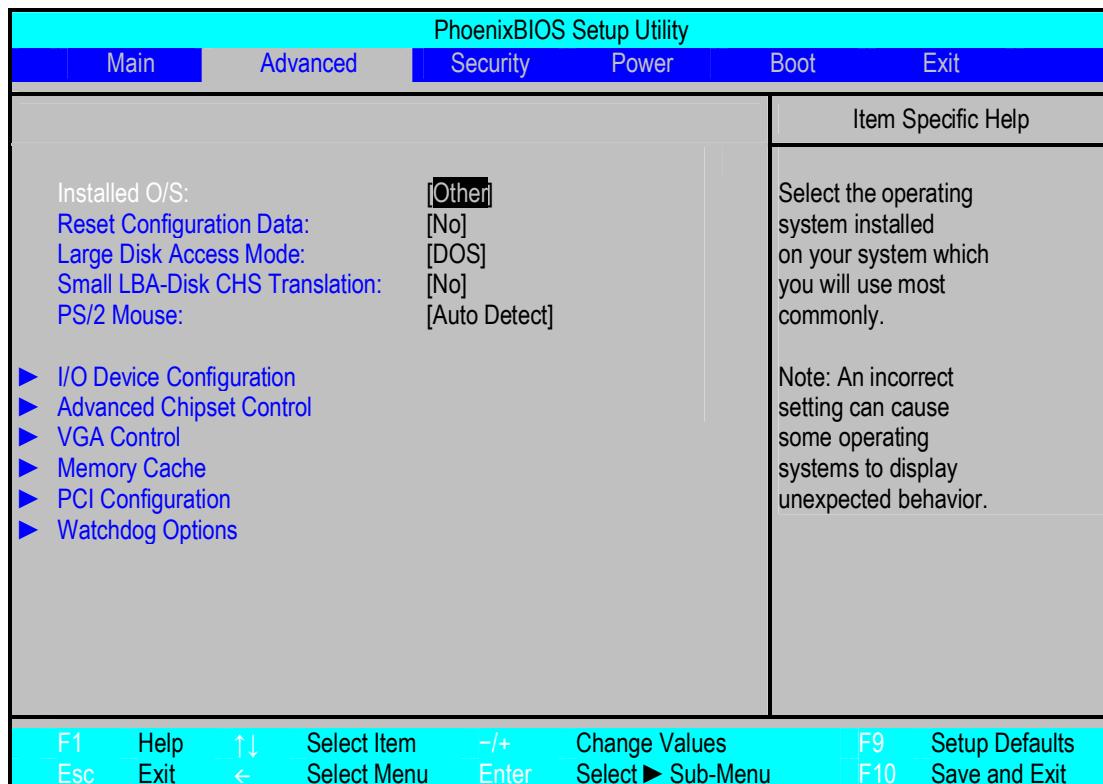

Feature	Options	Description
Boot-time Diagnostic Screen	Disabled, Enabled	<i>Enabled</i> displays the diagnostic screen during boot. <i>Disabled</i> displays the Phoenix Boot Logo.
Quick Boot Mode	Disabled, Enabled	<i>Enabled</i> allows POST to skip certain test while booting. This will decrease the time needed to boot the system.
FirstWare Video Mode	640x480 800x600 1024x768 1280x1024	Size of Boot Screen logo. O
Summary screen	Disabled, Enabled	<i>Enabled</i> displays system configuration on boot.
Boot with keyboard	Disabled, Enabled	When <i>enabled</i> POST checks for

		attached keyboard and show an error message if there is no keyboard attached.
Floppy check	Disabled, Enabled	<i>Enabled</i> verifies floppy type on boot. <i>Disabled</i> speeds up boot time.
Extended Memory Testing	Normal, Just zero it, None	Determines which type of test will be performed on extended memory during POST (above 1 MB). Enabled quick boot will bypass normal memory test.

4.4.2 The Advanced Menu

4.4.2.1 Advanced Menu Selections

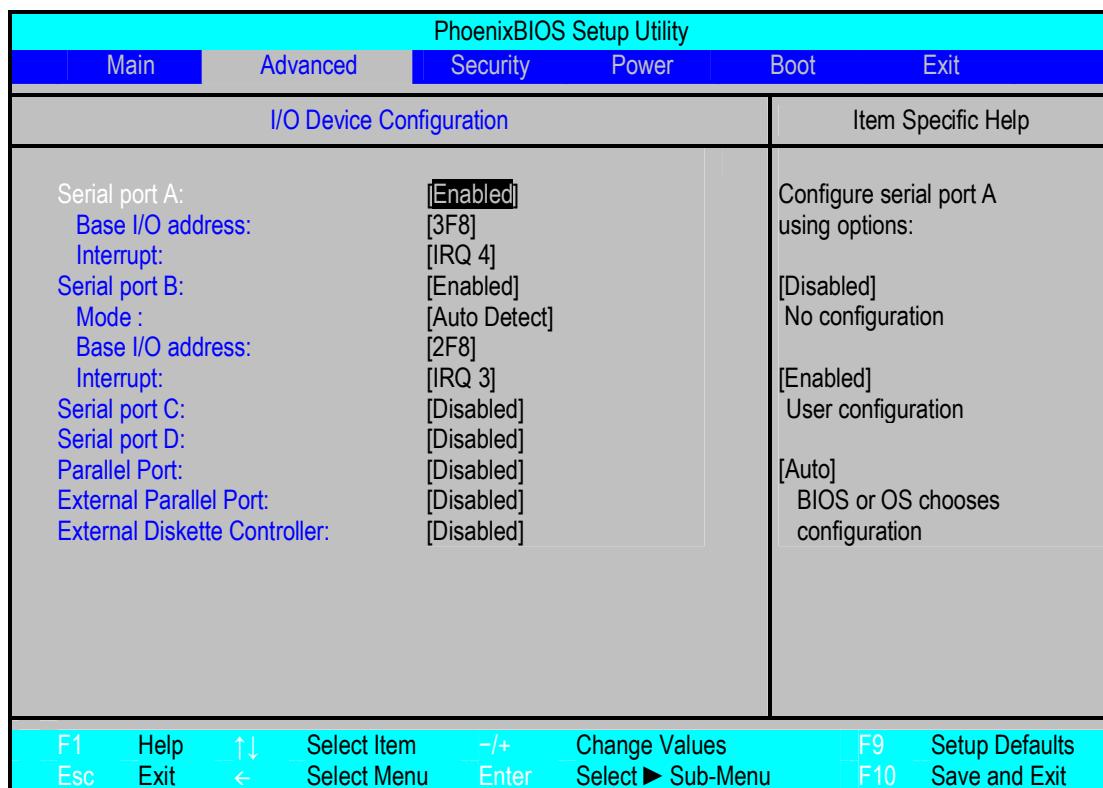

You can make the following selections on the Main Menu itself. Use the sub menus for other selections.

Feature	Options	Description
Installed O/S	Other, Win98, WinMe,	Select the operating system installed on your system which you will use most

	Win2000, WinXP	commonly. NOTE: An incorrect setting can cause some operating systems to display unexpected behavior.
Reset Configuration Data	No, Yes	Selecting Yes will clear the Extended System Configuration Data (ESCD) area.
Large Disk Access Mode	Other, DOS	Select Other for UNIX, Novell NetWare. Select DOS for all other operating systems.
Small LBA-Disk CHS Translation	No, Yes	Select Yes if CHS translation should be made for an LBA-capable hard disk with less than 1024 cylinders, e.g. Compact Flash. If you have problems with booting from a Compact Flash try to change this setting.
PS/2 Mouse	Disabled Enabled Auto Detect	'Disabled' prevents any installed PS/2 from functioning, but frees up IRQ12. 'Enabled' forces the PS/2 mouse port to be enabled regardless if a mouse is present. 'Auto Detect' will enable the PS/2 mouse only if present.
I/O Device Configuration	See "I/O Device Configuration" section.	
Advanced Chipset Control	See "Advanced Chipset Control" section.	
VGA Control	See "VGA Control" section.	
Memory Cache	See "Memory Cache" section.	
PCI Configuration	See "PCI Configuration" section.	
Watchdog Options	See "Watchdog Options" section.	

4.4.2.2 I/O Device Configuration Menu

Feature	Options	Description
Serial Port A	Disabled, Enabled, Auto	<i>Disabled</i> = Disabled the device <i>Enabled</i> = User configuration <i>Auto</i> = BIOS or OS chooses configuration
Base I/O address	3F8, 2F8, 3E8, 2E8	Set the base I/O address for Serial Port A.
Interrupt	3, 4	Set the interrupt for Serial Port A.
Serial Port B	Disabled, Enabled, Auto	<i>Disabled</i> = Disabled the device <i>Enabled</i> = User configuration <i>Auto</i> = BIOS or OS chooses configuration
Mode	Normal, IR, ASK-IR	Set the mode for Serial Port B (wired / infrared).
Base I/O address	3F8, 2F8, 3E8, 2E8	Set the base I/O address for Serial Port B.
Interrupt	3, 4	Set the interrupt for Serial Port B.

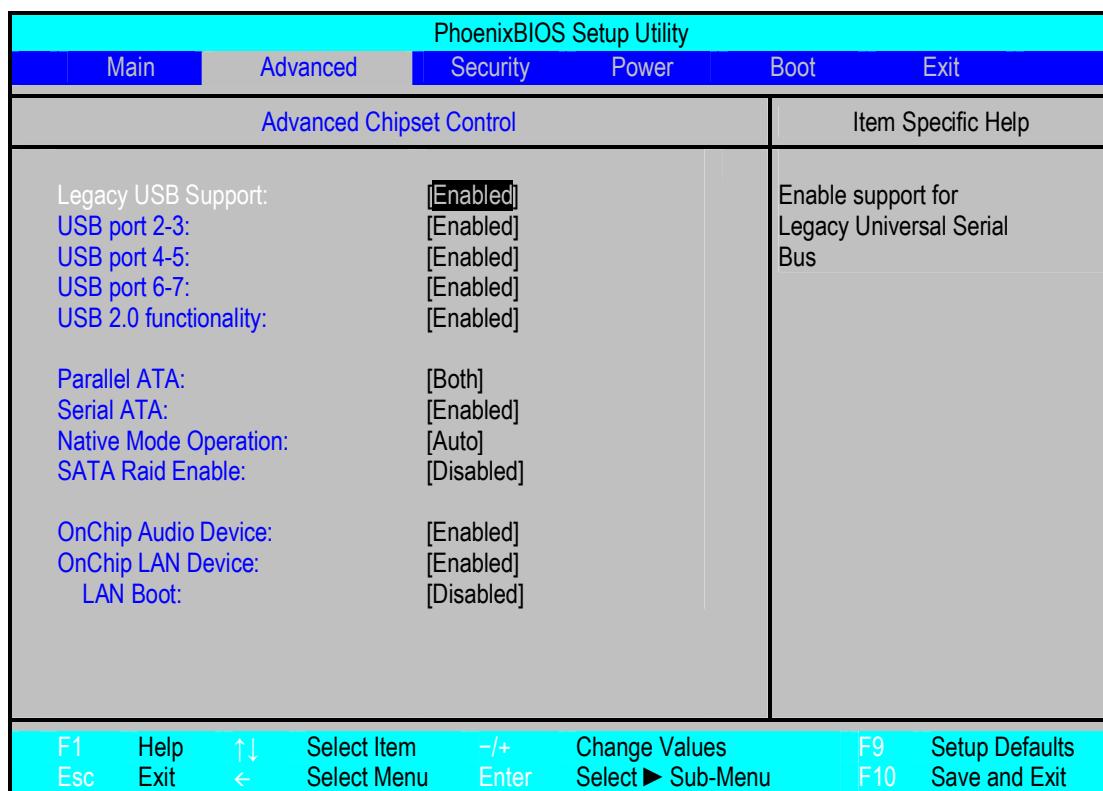

Serial Port C	Disabled, Enabled, Auto	<p><i>Disabled</i> = Disabled the device <i>Enabled</i> = User configuration <i>Auto</i> = BIOS or OS chooses configuration</p> <p>NOTE: Serial port C is available only if a 2nd SuperIO chip is implemented on the base board. Otherwise this menu item is invisible.</p>
Base I/O address	3E8, 2E8	Set the base I/O address for Serial Port C.
Interrupt	10, 11	Set the interrupt for Serial Port C.
Serial Port D	Disabled, Enabled, Auto	<p><i>Disabled</i> = Disabled the device <i>Enabled</i> = User configuration <i>Auto</i> = BIOS or OS chooses configuration</p> <p>NOTE: Serial port D is available only if a 2nd SuperIO chip is implemented on the base board. Otherwise this menu item is invisible.</p>
Mode	Normal, IR, ASK-IR	Set the mode for Serial Port D (wired / infrared).
Base I/O address	3E8, 2E8	Set the base I/O address for Serial Port D.
Interrupt	10, 11	Set the interrupt for Serial Port D.
Floppy Controller or Parallel Port	Disabled, Enabled, Auto	<p><i>Disabled</i> = Disabled the device <i>Enabled</i> = User configuration <i>Auto</i> = BIOS or OS chooses configuration</p> <p>NOTE: The floppy controller shares pins with the parallel port. Therefore, depending on the status of the LPT/FLPY# signal on pin 51 of the ETX connector X3, either the floppy controller entry <u>or</u> the parallel port entry is visible.</p>
Base I/O address	378, 278, 3BC	Set the base I/O address for Parallel Port.
Interrupt	5, 7	Set the interrupt for Parallel Port.
Mode	Output only, Bi-directional, EPP, ECP	Set the mode for Parallel Port.
DMA channel	1, 3	Set the DMA channel for Parallel Port (only available if mode was set to ECP).
External Parallel Port	Disabled, Enabled, Auto	<p><i>Disabled</i> = Disabled the device <i>Enabled</i> = User configuration <i>Auto</i> = BIOS or OS chooses configuration</p> <p>NOTE: External Parallel Port is available only if a 2nd SuperIO chip is implemented on the base board. Otherwise this menu item is invisible.</p>

Base I/O address	378, 278	Set the base I/O address for External Parallel Port.
Interrupt	5, 7	Set the interrupt for External Parallel Port.
Mode	Output only, Bi-directional, EPP	Set the mode for External Parallel Port.
External Diskette Controller	Disabled, Enabled, Auto	<p><i>Disabled</i> = Disabled the device <i>Enabled</i> = User configuration <i>Auto</i> = BIOS or OS chooses configuration</p> <p>NOTE: External Diskette Controller is available only if a 2nd SuperIO chip is implemented on the base board. Otherwise this menu item is invisible.</p>

Warning: If you choose the same I/O address or Interrupt for more than one port, the menu displays an asterisk (*) at the conflicting settings. It also displays this message at the bottom of the menu:

* Indicates a DMA, Interrupt, I/O, or memory resource conflict with another device.

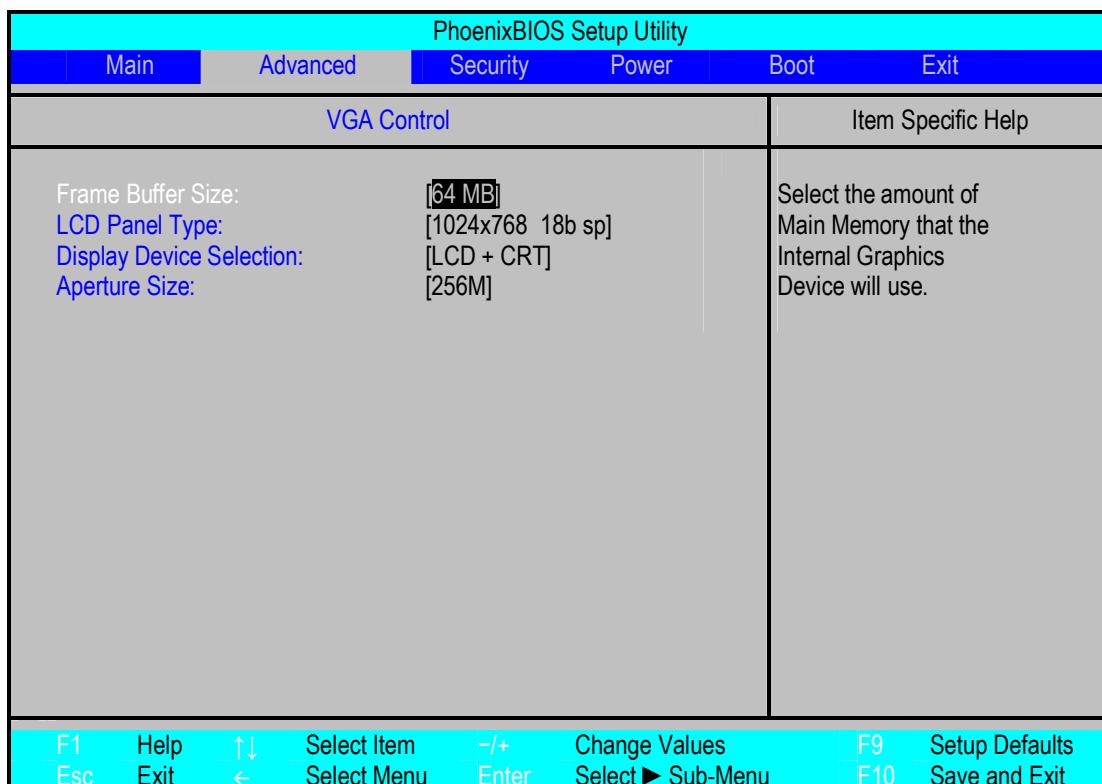

4.4.2.3 Advanced Chipset Control Menu

Feature	Options	Description
Legacy USB support	Disabled, Enabled	Enables support for Legacy USB.
USB port 2-3	Disabled, Enabled	Enables USB port 2-3 support.
USB port 4-5	Disabled, Enabled	Enables USB port 4-5 support.
USB port 6-7	Disabled, Enabled	Enables USB port 6-7 support.
USB 2.0 functionality	Disabled, Enabled	<i>Enabled</i> = USB 2.0 support, <i>Disabled</i> = USB 1.1 support
Parallel ATA	Disabled, Channel 0, Channel 1 Both	Enables certain channels of parallel IDE Controller.
Serial ATA	Disabled, Enabled	Enables the serial IDE Controller.
Native Mode Operation	Disabled, Enabled	Enables Native IDE support for WinXP. Enabling this feature for any other operating systems will have no effect.
OnChip Audio Device	Disabled, Enabled	Enables the onboard Audio controller.

OnChip LAN Device	Disabled, Enabled	Enables the onboard LAN controller.
LAN Boot	Disabled, Enabled	Allows network boot using the onboard LAN controller.

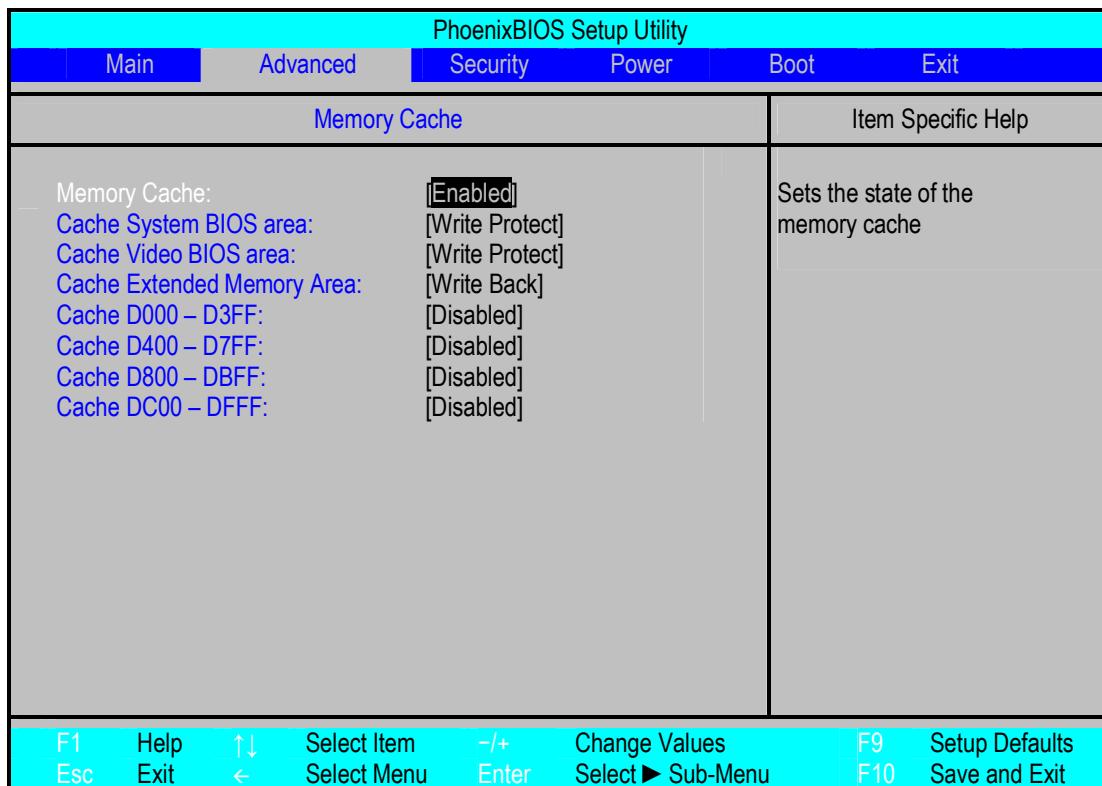

4.4.2.4 VGA Control

Feature	Options	Description
Frame Buffer Size	16 MB, 32 MB, 64 MB	Select the amount of main memory that the internal graphics device will use.
LCD Panel Type	640x480 18b sp 800x600 18b sp 1024x768 18b sp 1280x768 18b sp 1280x1024 18b dp 1400x1050 18b dp 1600x1200 18b dp 1280x800 18b sp 800x480 18b sp 1024x768 18b dp 1024x768 24b sp	Select the LCD panel to be used by the internal Graphics Device or use EEPROM with EDID and EPI data for auto detection. 18b = 18 bits resolution 24b = 24 bits resolution sp = one pixel per clock

	1024x768 24b dp 1280x768 24b sp 1280x768 24b sp 1400x1050 24b dp 1600x1200 24b dp	dp = two pixel per clock
Display Device Selection	CRT, LCD + CRT	Select the Video Device that will be activated during POST. CRT device is always enabled.
Aperture Size	32M, 64M, 128M, 256M, 512M	Select the size of the Graphics Aperture for the video device.

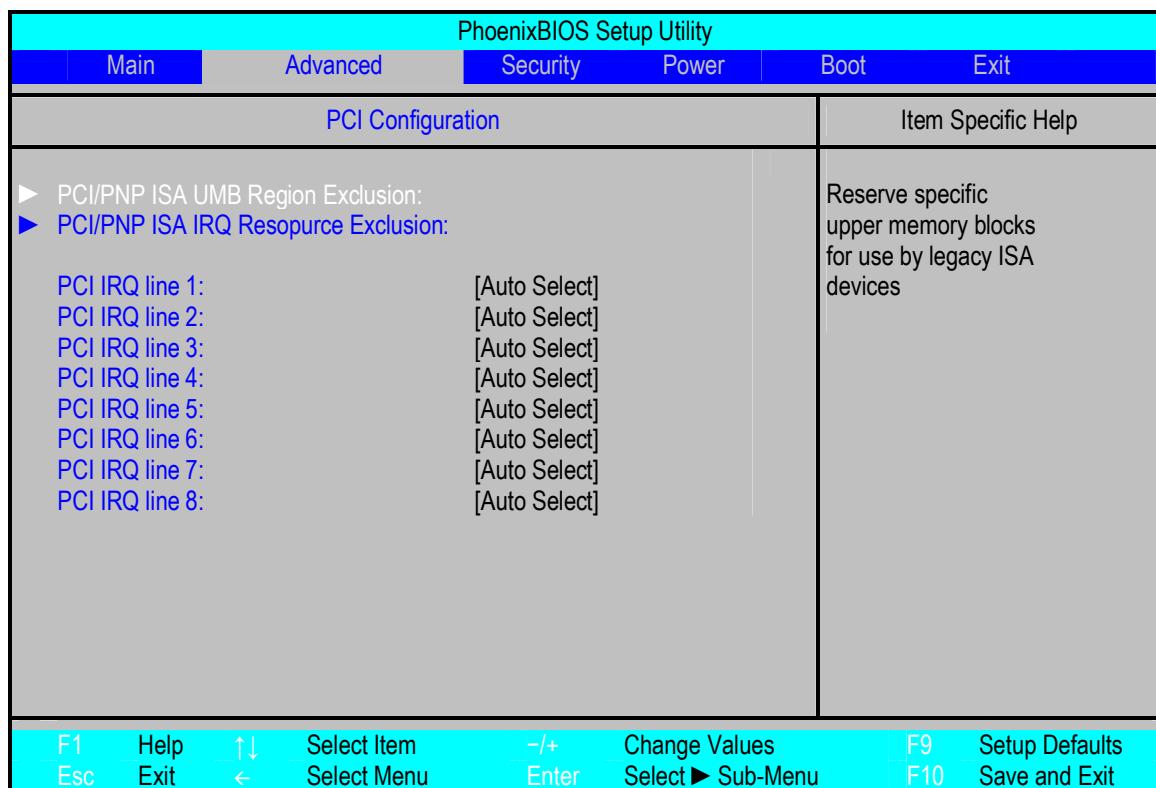

4.4.2.5 Memory Cache Control Menu

Feature	Options	Description
Memory Cache	Disabled, Enabled	Sets the state of the memory cache.
Cache System BIOS area	Uncached, Write Protect	Enables caching of system BIOS area.
Cache Video BIOS area	Uncached, Write Protect	Enables caching of video BIOS area.
Cache Extended	Uncached,	Enables caching of system memory

Memory Area	Write Through, Write Protect, Write Back	above 1 MB.
Cache D000 – D3FF Cache D400 – D7FF Cache D800 – DBFF Cache DC00 – DFFF	Disabled, Write Through, Write Protect, Write Back	<i>Disabled</i> = This block is not cached. <i>Write through</i> = Writes are cached and sent to main memory at once. <i>Write Protect</i> = Writes are ignored. <i>Write Back</i> = Writes are cached but not sent to main memory until necessary.

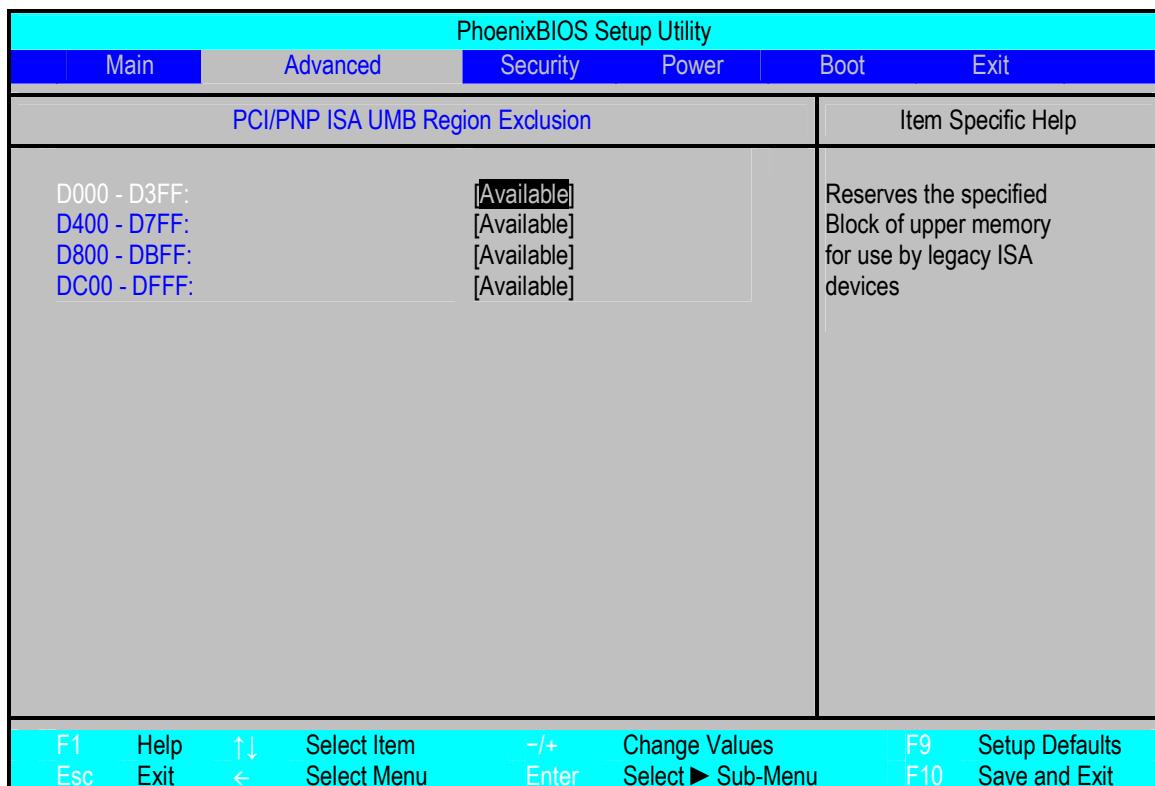

4.4.2.6 PCI Configuration Menu

Feature	Options		Description
PCI/PNP ISA UMB Region Exclusion	See “PCI/PNP ISA UMB Region Exclusion” section.		
PCI/PNP ISA IRQ Resource Exclusion	See “PCI/PNP ISA IRQ Resource Exclusion” section.		
PCI IRQ line 1	Disabled, Auto Select, 3-5, 7, 9-12, (14, 15)	IRQ assignment for PCI INT A. If set to Auto select BIOS will handle the IRQ setup.	
PCI IRQ line 2	see above	IRQ assignment for PCI INT B. If set to Auto select BIOS will handle the IRQ setup.	
PCI IRQ line 3	see above	IRQ assignment for PCI INT C. If set to Auto select BIOS will handle the IRQ setup.	
PCI IRQ line 4	see above	IRQ assignment for PCI INT D. If set to Auto select BIOS will handle the IRQ setup.	
PCI IRQ line 5	see above	IRQ assignment for PCI INT E. If set to Auto select BIOS will handle the IRQ setup.	

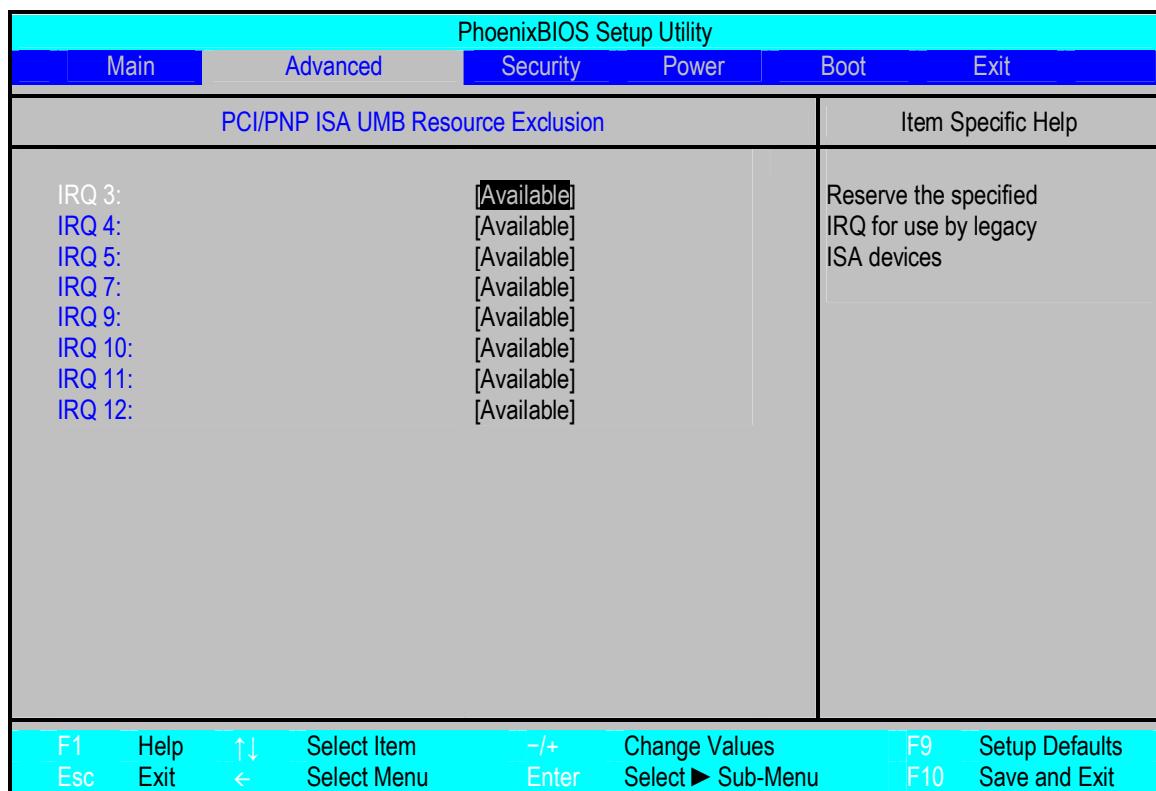

PCI IRQ line 6	see above	IRQ assignment for PCI INT F. If set to Auto select BIOS will handle the IRQ setup.
PCI IRQ line 7	see above	IRQ assignment for PCI INT F. If set to Auto select BIOS will handle the IRQ setup.
PCI IRQ line 8	see above	IRQ assignment for PCI INT H. If set to Auto select BIOS will handle the IRQ setup.

4.4.2.6.1 PCI/PNP ISA UMB Region Exclusion Configuration Menu

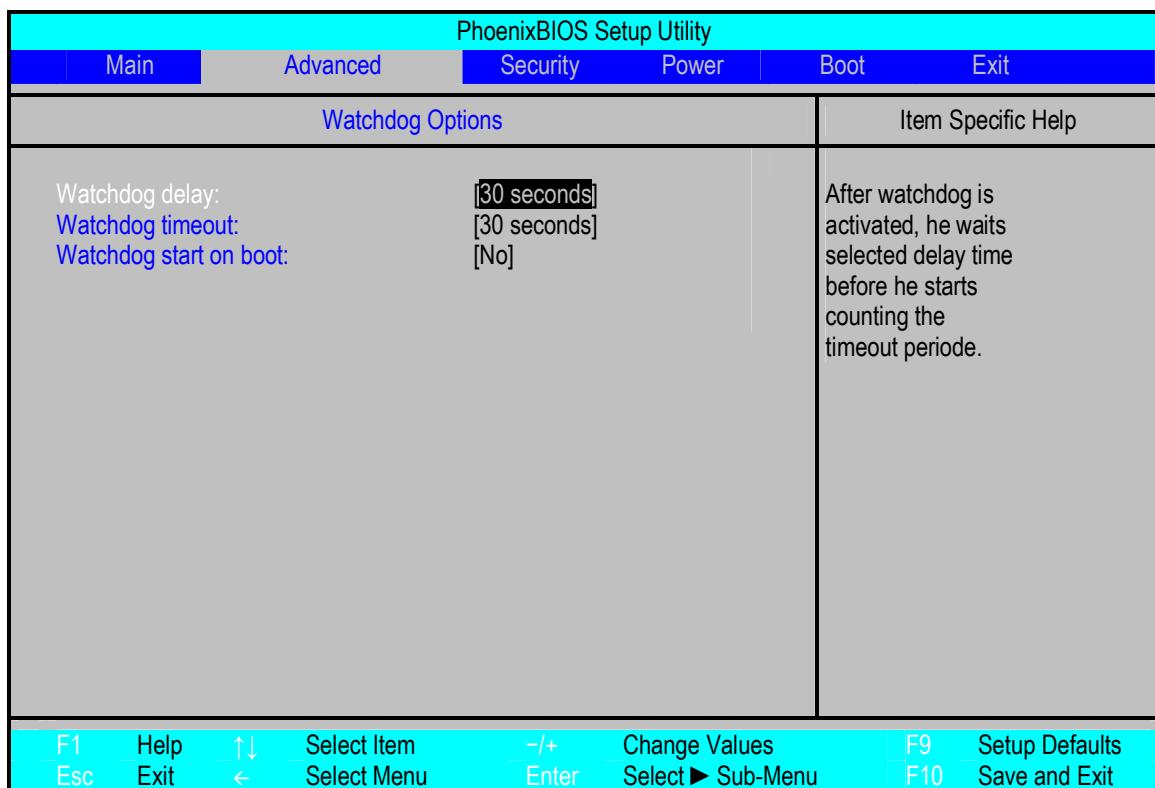

Feature	Options	Description
D000 – D3FF	Available, Reserved	Reserve this block of upper memory for use by legacy ISA devices.
D400 – D7FF		
D800 – DBFF		
DC00 – DFFF		

4.4.2.6.2 PCI/PNP ISA IRQ Resource Exclusion Configuration Menu

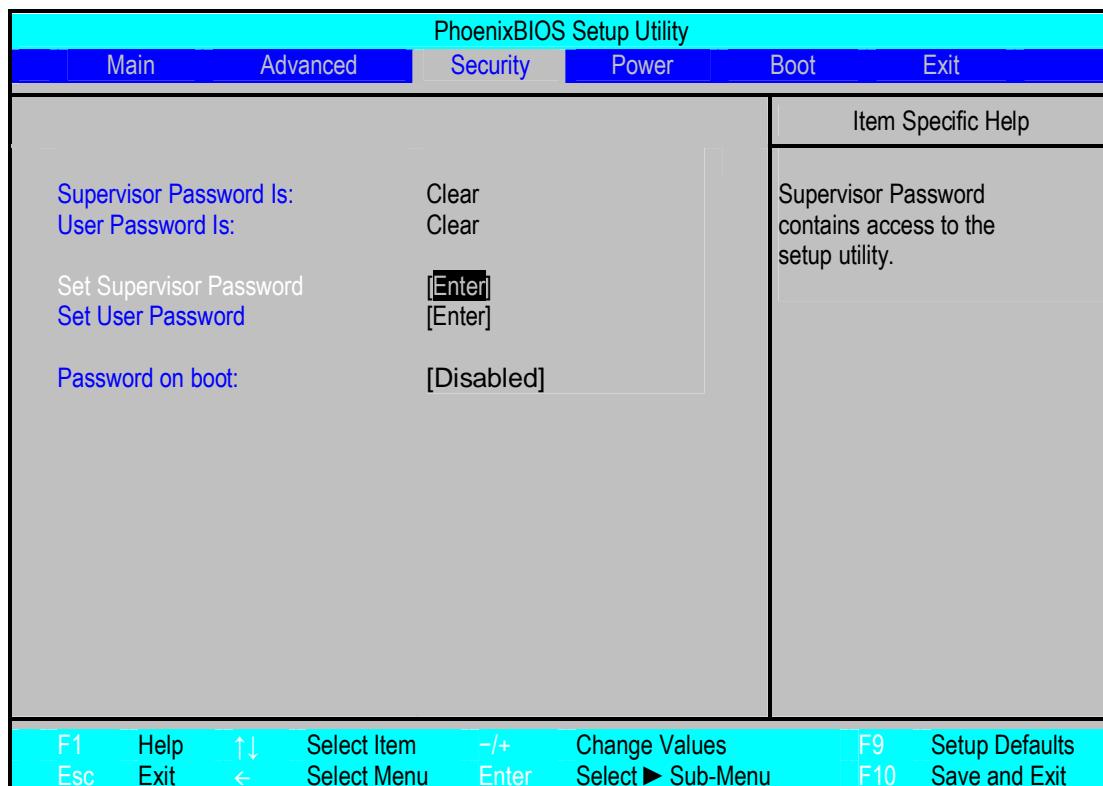

Feature	Options	Description
IRQ x	Available, Reserved	Reserve this IRQ for use by legacy ISA devices.
IRQ 14 IRQ 15	Available, Reserved	Reserve this IRQ for use by legacy ISA devices. Only available if no IDE device attached to the primary IDE port.

4.4.2.7 Watchdog Options

Feature	Options	Description
Watchdog delay	1 second, 5 seconds, 10 seconds, 30 seconds, 1 minute, 2 minutes, 10 minutes, 30 minutes	After watchdog is activated, he waits selected delay time before he starts counting the timeout period.
Watchdog timeout	0.4 second, 1 second, 5 seconds, 10 seconds, 30 seconds, 1 minute, 5 minutes, 10 minutes	Select the maximum watchdog trigger period. If the watchdog will not be triggered during selected period, system reset will be generated.
Watchdog start on boot	No, Yes	Select if the watchdog should be started at the end of POST – before OS is booted.

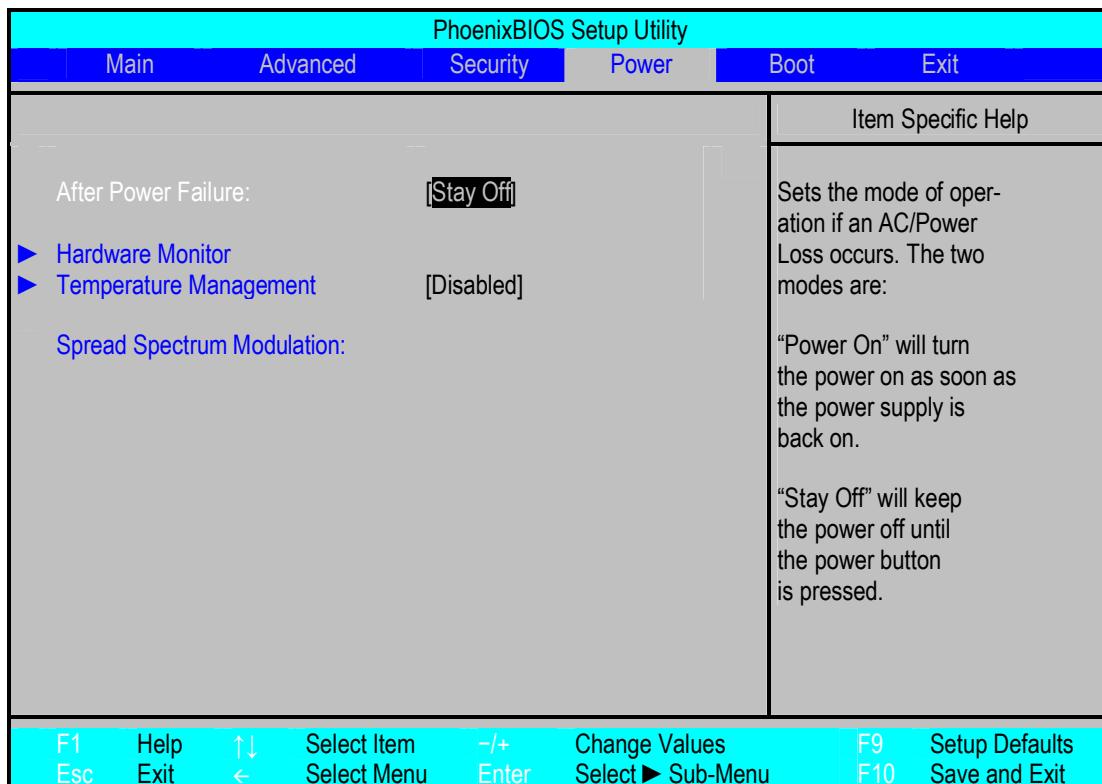

4.4.3 The Security Menu

Feature	Options	Description
Supervisor Password Is		Shows if supervisor password is set
User Password Is		Shows if user password is set
Set User Password	---	Sets the user password.
Set Supervisor Password	---	The supervisor password controls the access to the setup utility.
Password on boot	Disabled, Enabled	Enabled password entry on boot.

4.4.4 The Power Menu

4.4.4.1 Power Menu Selections

Feature	Options	Description
After Power Failure	Stay Off, Power On	Sets the mode of operation if an AC power loss occurs. <i>Power On</i> will turn the power on as soon as the power supply is back on. <i>Stay Off</i> will keep the power off until the power button is pressed.
Hardware Monitor	See " Hardware Monitor " section.	
Temperature Management	See " Temperature Management " section.	
Spread Spectrum Modulation	Disabled, 0.20%, 0.25%, 0.35%	Clock controller spread spectrum modulation reduces EMI.

4.4.4.2 Hardware Monitoring Menu

PhoenixBIOS Setup Utility					
Main	Advanced	Security	Power	Boot	Exit
Hardware Monitor				Item Specific Help	
CPU Temp Board Temp	= 48°C = 37°C				All items on this menu cannot be modified in user mode. If any items require changes, please consult your system Supervisor.
Vcore (CPU) V +2.5 V +3.3 V +1.5 V +1.05 Vbat	= 0.81 V = 2.49 V = 3.32 V = 1.48 V = 1.04 V = 3.16 V				
CPU FAN speed	No Function				
F1 Esc	Help Exit	↑ ↔	Select Item Select Menu	-/+ Enter	Change Values Select ► Sub-Menu
					F9 Setup Defaults F10 Save and Exit

Feature	Description
Board Temp	Displays the current Board Temperature.
CPU Temp	Displays the current CPU Temperature.
Vcore (CPU)	Displays the current CPU voltage.
V +2.5	Displays the current voltage.
V +3.3	Displays the current voltage.
V +1.5	Displays the current voltage.
V +1.05	Displays the current voltage.
Vbat	Displays the current Battery voltage.
CPU FAN speed	Displays the current FAN speed, only if a three wire FAN is connected to the board.

4.4.4.3 Temperature Management Menu

PhoenixBIOS Setup Utility					
Main	Advanced	Security	Power	Boot	Exit
Temperature Management				Item Specific Help	
Throttling Rate [50%] CPU Alarm Temperature [80°C] CPU Alarm Hysteresis [5°C] Board Alarm Temperature [50°C] Board Alarm Hysteresis [5°C]				CPU clock will be throttled by the selected value when reaching the temperature threshold.	
F1 Esc	Help Exit	↑ ↓ ←	Select Item Select Menu	-/+ Enter	Change Values Select ► Sub-Menu
					F9 Setup Defaults F10 Save and Exit

Feature	Options	Description
Throttling Rate	Disabled, 75%, 50%, 25%	If the CPU or Board temperature reaches the set temperature set in "CPU Alarm Temperature" or "Board Alarm Temperature" the CPU clock will be throttled by this value.
CPU Alarm Temperature	Disabled, 65°C, 70°C, 75°C, 80°C, 85°C, 90°C	Sets the CPU temperature at which the CPU clock will be throttled by the value set in "CPU Clock Throttling".
CPU Alarm Hysteresis	3°C, 4°C, 5°C, 6°C	Sets the temperature by which the set CPU Alarm Temperature has to decrease in order to stop CPU clock throttling again.
Board Alarm Temperature	Disabled, 40°C, 45°C, 50°C, 55°C, 60°C, 65°C, 70°C	Sets the CPU temperature at which the CPU clock will be throttled by the value set in "CPU Clock Throttling".
Board Alarm Hysteresis	3°C, 4°C, 5°C, 6°C	Sets the temperature by which the set CPU Alarm Temperature has to decrease in order to stop CPU clock throttling again.

4.4.5 The Boot Menu

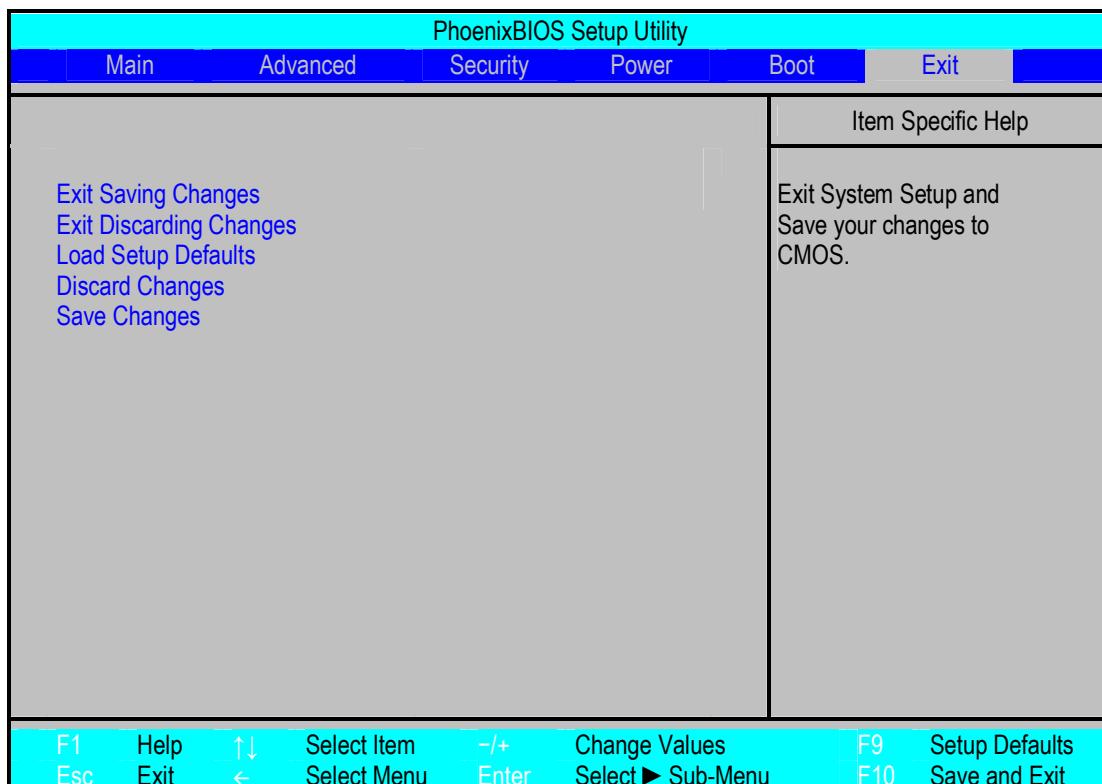

After you turn on your computer, it will attempt to load the operating system (such as DOS, Windows XP or Linux) from the device of your choice. If it cannot find the operating system on that device, it will attempt to load it from one or more other devices in the order specified in the Boot Menu. Boot devices (i.e., with access to an operating system) can include: hard drives, floppy drives, CD ROMs, removable devices (e.g. USB sticks), and network cards.

Note: Specifying any device as a boot device on the Boot Menu requires the availability of an operating system on that device. Most PCs come with an operating system already installed on hard-drive C:

Selecting "Boot" from the Menu Bar displays the Boot menu, which looks like this:

PhoenixBIOS Setup Utility					
Main	Advanced	Security	Power	Boot	Exit
Boot priority order: 1: USB KEY: 2: USB FDC: 3: IDE 4: 4: IDE 5: 5: IDE 0: ST320014A-(PM) 6: IDE 2: 7: PCI LAN: 8: Excluded from boot order: : IDE 1: : IDE 3: : USB HDD: : USB CDROM: : USB ZIP: : USB LS120: : PCI SCSI:					Item Specific Help
					Keys used to view or configure devices: Up and Down arrows select a device. <+> and <-> moves the device up or down. <f> and <r> specifies the device fixed or removable. <x> exclude or include the device to boot. <Shift + 1> enables or disables a device. <1 – 4> Loads default boot sequence.
F1 Esc	Help Exit	↑ ↓ Select Item Select Menu	-/+ Enter	Change Values Select ► Sub-Menu	F9 F10 Setup Defaults Save and Exit

4.4.6 The Exit Menu

The following sections describe each of the options on this menu. Note that <Esc> does not exit this menu. You must select one of the items from the menu or menu bar to exit.

4.4.6.1 Exit Saving Changes

After making your selections on the Setup menus, always select "Exit Saving Changes". This procedure stores the selections displayed in the menus in CMOS (short for "battery-backed CMOS RAM") a special section of memory that stays on after you turn your system off. The next time you boot your computer, the BIOS configures your system according to the Setup selections stored in CMOS.

If you attempt to exit without saving, the program asks if you want to save before exiting. During boot-up, PhoenixBIOS attempts to load the values saved in CMOS. If those values cause the system boot to fail, reboot and press <F2> to enter Setup. In Setup, you can get the Default Values (as described below) or try to change the selections that caused the boot to fail.

4.4.6.2 Exit Discarding Changes

Use this option to exit Setup without storing in CMOS any new selections you may have made. The selections previously in effect remain in effect.

4.4.6.3 Load Setup Defaults

To display the default values for all the Setup menus, select "Load Setup Defaults" from the Main Menu.

If, during boot-up, the BIOS program detects a problem in the integrity of values stored in CMOS, it displays these messages:

System CMOS checksum bad - run SETUP Press <F1> to resume, <F2> to Setup

The CMOS values have been corrupted or modified incorrectly, perhaps by an application program that changes data stored in CMOS.

Press <F1> to resume the boot or <F2> to run Setup with the ROM default values already loaded into the menus. You can make other changes before saving the values to CMOS.

4.4.6.4 Discard Changes

If, during a Setup Session, you change your mind about changes you have made and have not yet saved the values to CMOS, you can restore the values you previously saved to CMOS.

Selecting "Discard Changes" on the Exit menu updates all the selections with their previous values.

4.4.6.5 Save Changes

Selecting "Save Changes" saves all the selections without exiting Setup. You can return to the other menus if you want to review and change your selections.
